Directions (36-43): Read the following passage and answer the following questions based on the given passage. Some of the words are highlighted which would help you to answer some of the questions given.

A good night's sleep is of utmost essential for overall good health. It is the time when the body rests, rejuvenates, and recovers. An adult requires 7 to 8 hours of peaceful and quality sleep per day. Sleep deprivation can be defined as the inability to complete the sufficient sleep time required by the person. Research has shown that even one night of sleep deprivation is equivalent to being intoxicated. Intentional sleep deprivation is mostly seen in young people and teenagers who prefer entertainment oversleep. Many workaholics also consider sleeping as a waste of precious time which is not true. Many a time because of work commitments such as working night shifts or long hours may also interfere with the quality of sleep that an individual requires. Medical issues such as chronic illnesses, depression, and sleep disorders such as obstructive sleep apnea can also be the reason for sleep deprivation.

You probably already have some understanding of the benefits of rest—and the costs of not getting it.

Sleep allows us to consolidate and store memories, process emotional experiences, replenish glucose (the molecule that fuels the brain), and clear out beta-amyloid (the waste product that builds up in Alzheimer's patients and disrupts cognitive activity).

The most common sign and symptom of the fact that one is sleep deprived is fatigue, lethargy, and feeling sleepy throughout the day. Other symptoms include mood disorders; sleep deprivation may lead to increased irritability, desire to stay alone, rapid mood swings, and more. Lack of sleep will also cause psychomotor instability meaning the person will find it difficult to focus and stand still at a place. Sleep deprivation will also cause issues with sight and hearing. An affected person may experience a burning sensation in the eyes, tingling and redness of eyes, light flashes and even hallucinations. He or she may also find it difficult to gauge the distance at which a sound is originating. Other signs and symptoms of sleep deprivation include tingling sensations on the body, disorganization of thought and much more. The negative effects of sleep deprivation are many. It affects both the physical and mental health of a person negatively. The most common effect of sleep deprivation is drowsiness, tiredness, mood swings, irritability and reduced alertness. Although scientific knowledge of the physiological effects of sleep deprivation is relatively recent but researchers now believe that sleep deprivation can lead to disorders such as depression. Both short term sleep deprivation and chronic long-term sleep deprivation can be very dangerous for the health as it has a direct impact on the functioning of both the heart and brain of an individual. Sleep loss also blunted activity in brain regions that normally induce social engagement. During sleep, regeneration of neurons happens in the cerebral cortex. Thus in a sleep-deprived individual, the brain fails to function optimally.

Directions (53-58): In the following passage some words have been deleted. Fill in the blanks with the help of the alternatives given. Select the most appropriate option for each blank.

According to some researchers, musical instruments came about ___(18)___, depending on the available materials, and, in some cases, by the stimulus of the clamor of battle. The definition of a musical instrument is quite simple: it is an instrument that was created or ___(19)___ to make musical sounds. It is important to remember that the history of musical instruments dates back to the beginning of human culture. This tells us that man has always been drawn to music. The earliest musical instruments were used for rituals. For example, the trumpet-like ones were used to signal success in a hunt, or drum-like instruments were used in religious ceremonies.

Over time, cultures have developed the composition and performance of musical pieces for entertainment. Musical instruments have also ___(20)___ with ever-changing applications. It appears that no one knows exactly where the music came from. We are not talking here about who Elvis' singing predecessors were, not even about when the first musical instrument was invented. Researchers who have been interested in the physics of

instruments believe that musical devices have always ___(21)___ pretty much on the materials that were available to each civilization. In other words, people worked with what they had. In time, traditional poetry was ___(22)___ alongside human noise-makers and got rhythms to them. Again, there is no exact data to back this up, so no one knows exactly when the first song was born. However, adding stories to melodies became a tradition that was carried on to our days and it does not seem like it will ever go out of fashion.
